3d crosswords

For the Virtual Boy

Crosswords are simple enough. A 3x3 crossword is even simpler. But with the Virtual Boy, you need to have a third dimension for everything. So that is the reason why I'm introducing 3-D crosswords.

The object of the game is to complete a crossword. Across and down are simple enough. For the clues marked "3D", the clues are in the third dimension, for example, I 3D make up the squares marked 1, I0, and I5. To enter a letter, move the flashing letter to a square and press the A or B button to move through the alphabet until you find the right letter. A moves the alphabet forward and B moves it backwards. It's that easy... or is it? Once you successfully solve the puzzle, a congratulatory screen comes up and you can move on to the next puzzle. There are 4 puzzles to choose from in this demo.
